

Volpara Solutions & Octopus Deploy

 volparasolutions.com

"I had used Octopus Deploy with a previous company so when I started this current job and was tasked with speeding up the 2 day single environment build cycle it was a no brainer."

- Gareth Beaumont, Chief Architect

Their Story

Volpara Health Technologies Limited is a leading provider of breast imaging analytics and analysis products that improve clinical decision-making and the early detection of breast cancer.

Volpara Health Technologies Limited is a research, development, and manufacturing company based in Wellington, New Zealand. Their mission is to reduce the mortality and cost of breast cancer by providing clinically-validated software that underpins personalized, high-quality breast cancer screening.

Every day, Volpara software helps clinicians better understand their patients and administrators better understand their practices. With a diverse research team led by internationally recognized experts in medical physics, as well as proprietary medical imaging technology covered by multiple patents and trade marks, they apply science to the solving of clinical problems around the world.

What was it like before Octopus?

Very, very manual.

How was Octopus able to help?

I had used Octopus Deploy with a previous company so when I started this current job and was tasked with speeding up the 2 day single environment build cycle it was a no brainer. A lot of water under the bridge product wise since then but a deployment process typically takes around 20mins including a build out of VSTS these days so it is one of the easiest wins we have had.
